## A Shocking Field Trip!

Being safe has never been so smart!  
Make students Safety Smart!®

Do you think students would be interested in taking a field trip to a place that smashes, burns, explodes, and basically trashes the products they use everyday?

We thought so.

4<sup>th</sup> through 8<sup>th</sup> graders are invited to come to UL where they will learn how UL combines science and creativity to provide safety solutions for products found in their homes, schools and communities.

Students participate in safety science experiments designed to enhance safe behavior by applying a decision-making process: eliminate the hazard, guard against the hazard, and/or warn about the hazard. They will...

**EXPOSE** metal in a microwave

**PROPEL** a steel ball into a stereo unit

**DUNK** a hair dryer into a sink of water

**OVERLOAD** an extension cord with 4500 watts

We are located in Northbrook, Illinois, where we have over 700,000 square feet of laboratory and office space. Our laboratory is specially designed and equipped for conducting safety investigations on thousands of electrical, chemical, mechanical and fire-related products.

Come, see and experience first hand how we work behind the scenes to make our world a safer place.

Schedule a free field trip today!
