

I am Safety Smart!®

Electrify Your Classroom!

Make students Safety Smart!®
Bring the UL laboratory into your classroom.

To get students excited about safety science we are offering *Safety Smart*® classroom visits from a UL Safety Ambassador.

I am Safety Smart® is an educational program that teaches students how to make safety smart decisions where they live, learn and work. *Safety Smart*® messages enhance safe behavior by applying a decision-making process: eliminate the hazard, guard against the hazard, and/or warn about the hazard.

UL Safety Ambassadors use hands-on experiments to teach safety science right in your classroom.

BURN

Learn how fire requires oxygen to live. Safety Ambassadors combine that science lesson with the home safety lesson, don't put metal in a microwave.

ALARM

Race to change the smoke alarm batteries and sound your alarm first. Find out why a UL Certified alarm emits at least 85 decibels of sound.

DROP

Drop a curling iron then inspect it for exposure of live wires by using UL probes and discover what we mean when we say, "electricity in, fingers out".

By developing and sharing critical safety awareness messages, we will have a lasting and positive impact on preventing unintentional injuries and their consequences. We are empowering students to make smart, more informed safety choices and decisions today, tomorrow ...for life.

Invite a Safety Ambassador to your classroom today!
